                                                                                                              The present sequence, a human lymphotoxin beta receptor (LT-beta-R) blocking agent, comprises the extracellular ligand binding domain of the human LT-beta-R up to the transmembrane region. It can be used to treat a Thl cell mediated immune response which contributes to a delayed type hypersensitivity reaction, preferably contact, thereulin type or granulomatous hypersensitivity, graft versus host disease, organ rejection or an autoimmune disorder, i.e. multiple sclerosis, insulin dependent diabetes, sympathetic ophthalmia, uveitis and psoriasis. It can also be used to treat conditions exacerbated by the activities of Th-1 type cytokines, or Listeria, Toxoplasma or Mycobacterium infection. Its ability to selectively or partially block the LT-beta-R pathway may be useful.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Lymphotoxin-beta; LT-beta; LT-beta receptor; follicular dendritic cell; immune system; tumour; follicular lymphoma; extracellular domain; human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                       with missexpression or overexpression of signalling by the LT-beta-R pathway. The present LT-beta-R blocking agent is capable of selectively inhibiting Thi, but not Th2 cell dependent immune effector mechanisms. As Thi cytokines can inhibit Th2 cell dependent responses, the present LT-beta-R blocking agent may also indirectly stimulate certain Th2 cell dependent responses which are normally inhibited by Th1 induced cytokines. Doses of about 1 mg/kg of the present soluble LT-beta-R are expected to be suitable starting doses for optimising treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SQPQAVPPYASENQTCRDQEKEYYEPQHRICCSRCPPGTYVSAKCSRIRDTVCATCAENS 60

The invention provides a method for arresting or reducing, severity of the fletts of a tumnour by administration of a composition which inhibits the interaction between lymphotoxin (LT)-beta and its receptor. An inhibitor of the interaction between LT-beta and its receptor can be administered for altering the survival or maintenance of follicular dendritic cells in a subject and for altering the architecture of the organs of the immune system. The method is useful for traditing tumours, specifically follicular lymphomas. It offers an alternative therapy for hose with tumours resistant to traditional chemotherapy. The present sequence represents the extracellular region of the human LTbeta-receptor and comprises the ligand binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 YNEHWNYLTICQLCRPCDPVMGLBEIAPCTSKRKTQCRCQPGMFCAAWALECTHCELLSD 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pre-ligand assembly domain (PLAD). This protein and others of the TNFR superfamily can be utilised to inhibit PLAD self-association, TNF receptor or Fas oligomerisation in a cell and ligand binding to members of the TNFR superfamily or Fas. The PLAD containing proteins are also useful for treating inflammation associated with autoimmune disease and in screening for inhibitors of FLAD association. The treatable disorders include periodic fever syndromes, sepsis syndromes, adult respiratory distress syndrome, ulcerative colltis, Crohn's disease, rheumatoid arthritis, autoimmune gastritis, psoriasis, Still's disease, Behcet's disease, Sjogren's syndrome, ankylosing spondylitis, autoimmune uveitis, autoimmune lymphoproliferative syndrome (ALPS), hyper IgM syndrome, autoimmune lymphoproliferative syndrome (ALPS), hyper IgM syndrome, autoimmune perchitis musethoria graphs completed a syndrome, althoughous contains an anaemia, Goodpasture's syndrome, althoughous contains an anaemia, Goodpasture's syndrome, although contains an anaemia, Goodpasture's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             necrosis factor receptor (TNFR) protein pre-ligand assembly domain (PLAD). polynucleotides are useful in the treatment of tumours, resistance to parasite, bacteria and viruses, restenosis and graft versus host disease. They are also useful for inducing proliferation of T-cells, endothelial cells and certain haematopoietic cells, to regulate antiviral responses and to prevent certain autolumnune diseases after stimulation of TRID by an agonist or TRAIL binding facilitator. The, antibodies which bind TRID polypeptides are useful for treating and/or preventing diseases. associated with increased or decreased apoptotic cell death. The repolynucleotides, proteins, antibodies, agonists and antagonists cuseful in the diagnosis, treatment or prevention of: (a) cancer; (b) autoimmune disorders. (c) discourage provention of: (d) cancer; (e) (b) autoimmune disorders;(c) diseases associated with increased apoptosis;(d) cardiovascular disorders;and(e) viral infection activities, and can be used in gene therapy. The TRID polynucleotides are useful for detecting complementary polynucleotides. TRID proteins intracellular domain, also referred to as tumour necrosis factor receptor 5 (TWRR-5 or TR5)). TRID has cytostatic, immunosuppress antiparasitic, cardiant, anti-HIV, antiparkinsonian and vasotropic nootropic, (TNFR-5 or TR5)). TRID has cytostatic, immunosuppressive neuroprotective, antiviral, antiinflammatory, anticonvuls with TRID in the exemplification necrosis factor receptor used antiinflammatory, anticonvulsant, of the present receptor without invention and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes peptides and peptide analogues which correspond in primary sequence to a binding loop of a tumour necrosis factor receptor (TNF-R) superfamily member. The compounds are especially designed from a binding loop of TNF-R p55. They are capable of inhibiting TNF binding to its cellular receptors and may be used to inhibit the biological activities of TNF. They may be used in treating TNF-associated conditions such as acute and chronic inflammatory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   osteoclastogenesis and bone resorption. Osteoclastogenesis and bone resorption inhibiting peptide analogues from the present invention have osteopathic, cytostatic, antirheumatic, antiarthritic, antiinflammatory and immunomodulatory activities, and are tumour necrosis factor (TNN)-related activation-induced cytokine (TRANCE)/ receptor activator of NF-kappaB ligand (RANK) inhibitors. The method is useful for treating diseases characterised by bone loss such as osteoporosis, Paget's disease, metastatic bone disease, rheumatoid arthritis or periodontal alsease, and modulating dendritic cell maturation. T cell proliferation and/or CD40 receptor systems. The present sequence represents an extracellular Cys-rich domain of a tumour necrosis factor recept the control of the control o

This invention describes a novel method for the diagnosis of a disease caused by, or associated with, an RNA molecule that has a frameshift caused by, or associated with, an RNA molecule that has a frameshift caused by, or associated with, an RNA molecule that has a frameshift cancer and a wide range of neurodegenerative disorders (e.g. Alzheimer's disease, Down's syndrome, myotonic dystrophy, Huntington's disease, continuities as another in an interpretation of the method disease, Down's syndrome, myotonic dystrophy, Huntington's disease, continuities type II and many others listed) or susceptibility to these disorders. The method callows a definitive diagnosis of Alzheimer's disease in living patients, ct. at an early stage. It is based on the observation that disease may be considered by mutations in RNA rather than DNA. The invention describes the used of neuronal system RNA molecules, specifically proteins including conteins for proteins for proteins (beta-APP), the microtubule associated protein 2 (MAP2), neurofilament-i, neurofilament-i, neurofilament-i, neurofilament-i, neurofilament-i, controllament-i, neurofilament-i, neurofilament-i,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           6
diabetes mellitus type II; microtubule associated protein; Tau; Big Tau; ubiquitin B; apolipoprotein E; MAP2; neurofilament-L; neurofilament-F, neurofilament-F; presentiin I; presentiin II; cellular tunnour antigen; glial fibrillary acidic protein; GFAP; p53; semaphorin III; HUPF-1; bcl-2; B-cell leukemia/lymphoma 2 proto-oncogene; HWGP-C; NSP-A; high mobility group protein-C; neuroendocrine specific protein A.

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by constitutions. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. The acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies contacting the amount of bound protein in the sample. The comparisor of downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by cerayme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed contacting in the contactor of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical maging of sites expressing (II). (I) and (II) are useful in relating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and to produce other types of data and products dependent on DNA and amino acid sequences, ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                  Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (syndroits, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of brocein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to acnes proteins. These antibodies can be used to acnes proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        enzyme linked immunosorbent assay (ELLSA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                downregulate expression and activity of P. acnes polypeptides and
therefore treat P. acnes infections. The antibodies may also be used as
diagnostic agents for determining P. acnes presence, for example, by
SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelltis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA, inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (C in identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as (II) in the sequence. It's a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating (II) and of sites expressing (II). (II) and (II) are useful for treating contents, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and conditionally appreceded and produces dependent on but and conditionally administration of mutations. (II) are sequencees and the invention. (II) but was obtained in electronic format directly from WIPO (II) are invently from WIPO (II) are invently from will are the fire invention of the invention o

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antignes, in the sample. The polypeptides may be used as antignes, in the sample. The polypeptides may be used as antignes, in the sample. The polypeptides may be used as antignes, in the sample. The polypeptides may be used as antignes, in the sample. The polypeptides may be used as antignes. These antibodies can be used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ŏ
                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags and for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving antibodies against it, detecting or quantificating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating alsorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in disorders for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and cannon acid sequences. Abg00010-Abg30377 represent novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                   1 SOPQAVPPYASENQTCRDQE.....QSDTTCKNPLEPLPPEMSGT 197

Patent No. 5712112
GENERAL INFORMATION:
APPLICANT: Yu, Su-May
APPLICANT: Liu, Li-Fei
TITLE OF INVENTION: Gene Expression System Comprising the
TITLE OF INVENTION: Promoter Region of the Alpha-Amylase Genes
NUMBER OF SEQUENCES: 7
CORRESPONDENCE ADDRESS:
ADDRESSEE: Marshall, O'Toole, Gerstein, Murray & Borun
STREET: 6300 Sears Tower, 233 South Wacker Drive
                                           ADDRESSEE: Marshall, O'Toole, Gerstein, Murray & Borun
STREET: 6300 Sears Tower, 233 South Wacker Drive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 437;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0; Indels

avermectin B 5-0-methyltransferase (EC 2.1.1..) - Streptomyces "avermitilis" C; Species: Streptomyces "avermitilis" C; Species: Streptomyces "avermitilis" C; Species: O5-Dec-1998 #sequence_revision O5-Dec-1998 #text_change 16-Jul-1999 C; Accession: JG6531 R: Ikeda, H: Wang, L.R.; Ohta, T.; Inokoshi, J.; Omura, S. Gene 206, 175-180, 1998 A; Title: Cloning of the gene encoding avermectin B 5-0-methyltransferase in avermectin A; Reference number: JC6531; MUID:98137789
                                                                                                                                                                                                                                                                 A.Accession: JC6531
A.Moleoule type: DNA
A.Residues: 1-283 <IKE>
A.Experimental source: wild type K139
C.Coment: This enzyme catalyzes the methylation of the hydroxyl group at the C5 post
A.Genetics:
A.Gene: avep
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hypothetical protein F3F19.1 - Arabidopsis thaliana C;Species: Arabidopsis thaliana (mouse-ear cress)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            deltah: functional analysis and comparative genomics.";
J. Bacteriol. 179:7135-7155(1997).
I. FUNCTION: THE KEY ENZYMATIC REACTIONS IN NITROGEN FIXATION ARE
CATALYZED BY THE NITROGENASE COMPLEX, WHICH HAS 2 COMPONENTS: THE
IRON PROTEIN AND THE MOLYBDENUM-IRON PROTEIN.
I. CATALYTIC ACTIVITY: 8 reduced ferredoxin + 8 H(+) + N(2) + 16 ATP
= 8 oxidized ferredoxin + 2 NH(3) + 16 ADP + 16 phosphate.
I. SUBUNIT: TETRAMER OF TWO ALPHA AND TWO BETA CHAINS THAT BINDS
30-32 FE, 2 MO, AND INORGANIC SULFUR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Smith D.R., Doucette-Stamm L.A., Deloughery C., Lee H.-M., Dubois J., Aldredge T., Bashirzadeh R., Blakely D., Cook R., Gilbert K., Harrison D., Hoang L., Keagle P., Lumm W., Pothier B., Qiu D., Spadafora R., Vicare R., Wang Y., Wierzbowski J., Gibson R., Jiwani N., Caruso A., Bush D., Safer H., Patwell D., Prabhakar S., Daniels C.J., Mao J.-I., Rice P., Noelling J., Reeve J.N., "Complete genome sequence of Methanobacterium thermoautotrophicum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

C. I- FUNCTION: THIS IS ONE OF THE THREE CHAINS OF THE NONENZYMATIC
COMPONENT (FF(0) SUBDUIT) OF THE ATPASE COMPLEX.
C. I- SUBUNIT: R-TYPE ATPASES HAVE 2 COMPONENTS, CF(1) HAS FIVE
SUBUNIT: S. ALFA(3), GAMMA(1), DELTA(1), EPSILON(1). CF(0)
HAS THREE MAIN SUBUNITS: A, B AND C.
C. I- MISCELLANEOUS: DICYCLOHEXYLCARBODIMIDE (DCDD) INHIBITS ATPASE.
C. I- SIMILARITY: BELONGS TO THE ATPASE C CHAIN FAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;
0
                                                                          The present sequence, a human lymphotoxin beta receptor (LT-beta-R) blocking agent, comprises the extracellular ligand binding domain confine human LT-beta-R up to the transmembrane region. It can be used to treat a Thl cell mediated immune response which contributes to a delayed type hypersensitivity reaction, preferably contact, tuberculin type or granulomatous hypersensitivity graft versus host disease, organ rejection or an autoimmune disorder, i.e. multiple sclerosis, insulin dependent diabetes, sympathetic conditions exacerbated by the activities of Th-1 type cytokines, or listeria, Toxoplasma or Mycobacterium infection. Its ability to selectively or partially block the LT-beta-R pathway may be useful in the treatment of abnormal lymphoid organ development associated with misexpression or overexpression of signalling by the LT-beta-R pathway. The present LT-beta-R blocking agent is capable of selectively inhibiting Thl, but not Th2 cell dependent immune effector mechanisms. As Thl cytokines can inhibit Th2 cell dependent responses, the present LT-beta-R blocking agent may also indirectly stimulate certain Th2 cell dependent responses which are normally inhibited by Th1 induced cytokines. Doses of about 1 mg/kg of the present soluble LT-beta-R are expected to be suitable get starting doses for optimising treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ta; LT-beta; LT-beta receptor; follicular dendritic cell; tumour; follicular lymphoma; extracellular domain; human.

The invention provides a method for arresting or reducing, severity of effects of a tumour by administration of a composition which inhibits the interaction between lymphotoxin (LT)-beta and its receptor. An inhibitor of the interaction between LT-beta and its receptor can be administered for altering the survival or maintenance of follicular administered for altering the survival or maintenance of follicular organs of the immune system. The method is useful for treating the architecture of the immune system. The method is useful for treating tumours, specifically follicular lymphomas. It offers an alternative therapy for those with tumours resistant to traditional chemotherapy. The present sequence represents the extracellular region of the human LTbeta-receptor and comprises the ligand binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; turmour necrosis factor receptor 5; TRID; TNFR-5; TR5; nootropic; TRAIL receptor without intracellular domain; diagnosis; cytostatic; turmour necrosis factor related apoptosis inducing ligand; vasotropic; immunosuppressive; neuroprotective; antiviral; antiinflammatory; anticonvulsant; antiparastic; cardiant; anti-HIV; antiparkinsonian; gene therapy; restenosis; graft versus host disease; turmour; cancer; apoptotic cell death related disease; autoimmune disorder;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MX BX BX SX
                                                                                                                                                                                                                                                      The present invention describes the human TRID protein (tumour necrosis factor (TNF) related apoptosis inducing ligand (TRAIL) receptor without intracellular domain, also referred to as tumour necrosis factor.

Creceptor 5 (TRNF-5 or TR5). TRID has cytostatic, immunosuppressive, noctropic, neuroprotective, antiviral, antiinflammatory, anticonvulsant, cardiant, anti-HIV, antiparkinsonian and vasotropic activities, and can be used in gene therapy. The TRID polynucleotides are useful in the treatment of tumours, resistance to polynuclocities are useful in the treatment of twoours, resistance to parasite, bacteria and viruses, restenosis and graft versus host disease. They are also useful for inducing proliferation of T-cells, endothelial cells and certain haematopoietic cells, to regulate antiviral responses and cortain autoimmune disease after stimulation of TRID by an agonist or TRAIL binding facilitator. The antibodies which bind TRID colypeptides are useful for treating and/or preventing diseases associated with increased or decreased apoptotic cell death. The TRID colides, antibodies, agonists and antagonists are useful in the diagnosis, treatment or prevention of: (a) cancer; are useful in the diagnosis, treatment or prevention of: (a) cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (b) autoimmune disorders; (c) diseases associated with increased apoptosis; (d) cardiovascular disorders; and (e) viral infection. The present sequence represents a tumour necrosis factor receptor used in comparison with TRID in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 YNEHWNYLTICQLCRPCDPVMGLEEIAPCTSKRKTQCRCQPGMFCAAWALECTHC--ELL 118

The present invention describes peptides and peptide analogues which correspond in primary sequence to a binding loop of a tumour necrosis factor receptor (TNR-R) superfamily member. The compounds are especially designed from a binding loop of TNR-R p55. They are capable of inhibiting TNR binding to its cellular receptors and may be used to inhibit the biological activities of TNR-They may be used in treating TNR-associated conditions such as acute and chronic inflammatory responses, septic shock, cachexia, autoimmunity, graft-versus-host disease, skin allergic reactions, immune complex disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              transplantation rejection and malaria. Administration is, e.g. oral, transdermal, transmucosal, pulmonary, subcutaneous, intravenous or intramuscular. Parenteral dosage is 0.1-5 mg/kg/day. The present sequence represents an extracellular Cys-itch domain of TNF-R from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           52 VCATCAENSYNEHWNYLTICOLCRPCDPVMGLEEIAPCTSKRKTOCRCOPGMFCAAWALE 111

                                                                                                                                                                                                                                                                                                                                                                                   osteoclastogenesis and bone resorption. Osteoclastogenesis and bone resorption inhibiting peptide analogues from the present invention have osteopathic, cytostatic, antirheumatic, antiarthritic, antiinflammatory and immunomodulatory activities, and are tumour necrosis factor (TNF) related activation-induced cytokine (TRANCE)/ receptor activator of Wiseases characterised by bone loss such as useful for treating diseases, metastatic bone disease, rheumatoid arthritis or periodontal disease, and modulating dendritic cell maturation; T cell proliferation, and/or CD40 receptor systems. The present sequence represents an extracellular Cysrich domain of a tumour necrosis factor receptor (TNF) superfamily member, which is used in the exemplification of
osteoclastogenesis; bone loss; bone resorption; osteopathic; cytostatic; antirheumatic; antiarthritic; antiinflammatory; immunomodulatory; tumour necrosis factor-related activation-induced cytokine; TRANCE;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence of a recombinant human (rhu) tumour necrosis factor receptor {\tt TNFR/fc} fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                52 VCATCAENSYNEHWNYLTICQLCRPCDPVMGLEEIAPCTSKRKTQCRCQPGMFCAAWALE 111

AAQ45224 is CDNA from clone 1 of library WI-26 VA4 of human fibroblast cell line WI-26 VA4. The mature full-length TNFRI is a glycoprotein having a mol. wt. of about 75-80 kba. The cloning of the CDNA for TNFRI was described in Smith et al., Science 248:1019,1990. Clone 1 is contained in expression vector pCNV/NOT-TNFR (ATCC 68088). A recombinant chimeric antibody may be produced having TNFR sequences substituted for the variable domains of either or both of the immunoglobulin molecule heavy and light chains and having unmodified constant region domains. A specific example of a TNFR/FC fusion protein is given in AAQ45225/R51003. The rhu TNFR:FC fusion gene was created by ligating the following fragments into a cloning vector: 1) an 867 bp Asp718-Pvuiz fragment from pCAV/NOT-TNFR (ATCC 68088) contg. the cDNA encoding the truncated TNFR. 2) a 700 bp cettor contg. the FC fragment of human IgG1. 3) An oligo linker; to fuse the truncated TNFR plasmid pIXY498 is a yeast expression contog. The FC fragment of human IgG1. 3) An oligo linker; to fuse the truncated TNFR receptor and the 5' end of human IgG1, and primer AAQ45226, which encodes the 3' end of the truncated TNF receptor and the 5' end of human IgG1, and primer AAQ45220; which encodes the and of the fruncated TNF with the human IgG1, end of them IgG1, and an antisense sequence encoding bps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5 AVPPYASE-NQTCRDQEKEYYEPQHRICCSRCPPGTYVSAKCSRIRDTVCATCAENSYNE 63

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A ligand to a member of the tumour necrosis factor (TNF)/nerve growth factor (NGF) receptor family which binds either to the region of the 4th-Cys rich domain of the receptor, or to the region between it and the cell membrane may be used in the production of a pharmaceutical composition for increasing the inhibitory effect of a soluble receptor of the TNF/NGF receptor family. This sequence is the sequence of the p75 TNF receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5 AVPPYASE-NQTCRDQEKEYYEPQHRICCSRCPPGTYVSAKCSRIRDTVCATCAENSYNE 63

The invention relates to a number of primate and/or rodent proteins, and the genes which encode them. The invention encompasses human dendritic cell prostaglandin transporter (DC-PGT); the TNF (tumour necrosis factor) receptor family-related proteins HPTER84, HSLUD37R and RANKL; human CC chemokine HCC5; human deubiquitinating proteins Dubl1 and Dub 12; human Mo-1 and human and murine MD-2 proteins, which exhibit the properties of ligands for proteins comprising a leucine-rich motif (LRR); human cyclin E2; cDNAs encoding these proteins; and antibodies against these proteins. The proteins can be used for modulating the physiology or development of a cell. They can be used to mediate uptake of substrates (e.g., prostaglandin-like molecules), to modulate or mediate cellular interactions (e.g., induce or prevent trafficking, proteins which are important in various cellular processes such as the deubiquitination of proteins or call cycle regulation. The products can be used for treating medical conditions such as immune, inflammatory or be used for treating medical conditions and as immune, inflammatory or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              autoimmune thyroiditis, as well as acute and chronic inflammatory responses in which T cell activation, expension, and/or immunological T cell memory play an important role. Sequences AAY77463-Y77464, AAY77474-Y77475 and AAY77484 represent primate proteins of undefined
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   function, AAY77462 and AAY77481 are rodent proteins of undefined function, and AAY77482 is an avian protein of undefined function. These sequences are given in the sequence listing but are not referred to in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     allergic disorders, or abnormal cellular proliferation, for example, cancers or degenerative conditions. They can be used to modulate immune responses in disease states e.g., autoimmune disorders, including
